

Para crear un Nuevo repositorio en GitHub, tendremos dos opciones:

- Pestaña HOME, dándole al Botón de New repository

- Desde el botón de “+” y New Repository

Una vez creado, le daremos un nombre, metemos una descripción, y elegiremos la visibilidad del mismo. El Activar el Readme es opcional. Le damos a Crear Repository

The screenshot shows the 'Create a new repository' form. Several fields are highlighted with red boxes:

- Owner:** A dropdown menu showing 'JoseGuBarro' with a red box around it.
- Repository name:** An input field containing 'TareaIPA' with a red box around it.
- Description:** A text area containing 'Repositorio Para tarea 1 de Programación IA' with a red box around it.
- Choose visibility:** A dropdown menu set to 'Public' with a red box around it.
- Add README:** A section with a toggle switch set to 'On' and a dropdown menu set to 'No ignore' with a red box around it.
- Add .gitignore:** A dropdown menu set to 'No ignore' with a red box around it.
- Add license:** A dropdown menu set to 'No license' with a red box around it.
- Create repository:** A green 'Create repository' button at the bottom with a red box around it.

Una vez creado si queremos insertar un archivo, le daremos a Add File y luego a posterior Upload Files
